

## FD150 Terminal

### The challenge

When it comes to processing payments, every merchant needs reliable, high-performance equipment for fast transactions that keep the line moving. The all-in-one FD150 payment terminal combines mag stripe and card data protection with EMV® and contactless (NFC) acceptance to fulfill your payment needs.

### The solution

The FD150 is an affordable terminal solution that combines performance, reliability and ease of use in a compact, feature-rich device.

If you choose to connect via your existing broadband Internet service, our Datawire Secure Transport solution provides speed and card data protection, and may even save you money over other options (optional dial backup; analog phone line required). If you prefer, you may connect via Wi-Fi.

### Here's how it works

Installation is simple, with easy-to-follow on-screen prompts. Setup takes just a few minutes per terminal. The FD150 terminal accepts PIN-secured and signature debit cards, all major credit cards, contactless payments and gift cards. With the addition of a check reader, it also enables you to accept paper checks\*, which can be transmitted in electronic form by opting for the TeleCheck Electronic Check Acceptance® solution.

As an option, the FD150 also offers Dynamic Currency Conversion (DCC) service, which makes it possible for international customers to pay in their own currency.
